Chapter 1

Package org.stfm.texdoclet

Package Contents	Page
Interfaces ClassFilter	4
Classes	
ClassHierachy	4
Manages and prints a class hierarchy.	
HelpOutput	$\dots 5$
HTMLtoLaTeXBackEnd	
InterfaceHierachy	8
Manages and prints a interface hierarchy.	
MarkdownTest	9
This class is just for testing the Mardown processing output.	
Package	13
This class is used to manage the contents of a Java package.	
TableInfo	15
This class provides support for converting HTML tables into LATEX tables.	
TestFilter This class filters out classes beginning with "Test" when applied to the Doclet.	18
TeXDoclet This class provides a Java javadoc Doclet which generates a LATEX 2_{ε} document out of the java classes that it is used on	19

This doclet is based on the doclet originally created by Greg Wonderly of C2 technologies Inc. and its revision by XO Software. The project of Greg Wonderly is available here: http://java.net/projects/texdoclet.

1.1 Interface ClassFilter

This interface can be implemented and a class name provided to the Doclet to filter which classes are and are not included in the output document.

1.1.1 Declaration

public interface ClassFilter

1.1.2 All known subinterfaces

TestFilter (in 1.9, page 18)

1.1.3 All classes known to implement interface

TestFilter (in 1.9, page 18)

1.1.4 Method summary

includeClass(ClassDoc) Filters the ClassDoc passed.

1.1.5 Methods

• includeClass

boolean includeClass(com.sun.javadoc.ClassDoc cd)

- Description

Filters the ClassDoc passed. If true is returned, the passed class will be included into the output. If false is returned, this document will not be included.

1.2 Class ClassHierachy

Manages and prints a class hierarchy. Use add to add another class to the hierarchy. Use printTree to print the corresponding LATEX.

1.2.1 Declaration

public class ClassHierachy **extends** java.lang.Object

1.2.2 Field summary

root

1.2.3 Constructor summary

ClassHierachy() Creates new ClassHierachy

1.2.4 Method summary

add(ClassDoc) Adds another class to the hierarchy
printBranch(RootDoc, SortedMap, double, double) Prints a branch of the
 tree.
printTree(RootDoc, double) Prints the LATEX corresponding to the tree.

1.2.5 Fields

• public java.util.SortedMap root

1.2.6 Constructors

- ClassHierachy public ClassHierachy()
 - DescriptionCreates new ClassHierachy

1.2.7 Methods

• add

protected java.util.SortedMap add(com.sun.javadoc.ClassDoc cls)

Description

Adds another class to the hierarchy

• printBranch

protected void printBranch(com.sun.javadoc.RootDoc rootDoc, java.util.SortedMap map, double indent, double overviewindent)

- Description

Prints a branch of the tree. The branch is printed using TeXDoclet.os.

• printTree

 $\begin{array}{ll} \texttt{public void printTree}(\texttt{com.sun.javadoc.RootDoc}, \ \texttt{double} \\ \textbf{overviewindent}) \end{array}$

- Description

Prints the LATEX corresponding to the tree. The tree is printed using TeXDoclet.os.

1.3 Class HelpOutput

1.3.1 Declaration

public class HelpOutput **extends** java.lang.Object

1.3.2 Constructor summary

HelpOutput()

1.3.3 Method summary

printHelp()

1.3.4 Constructors

• HelpOutput public HelpOutput()

1.3.5 Methods

• printHelp protected static void printHelp()

1.4 Class HTMLtoLaTeXBackEnd

This class implements a ParserCallback that translates HTML to the corresponding LATEX. Not all tags a processed but the most common are.

HTML links to files located in the doc-files directory (appendix_a.html, appendix_b.txt) are transformed to references to the appendix, whereby the referenced files itself are included in the appendix.

1.4.1 See also

- javax.swing.text.html.parser.ParserDelegator

1.4.2 Declaration

 $\begin{array}{l} \text{public class HTMLtoLaTeXBackEnd} \\ \textbf{extends javax.swing.text.html.HTMLEditorKit.ParserCallback} \end{array}$

1.4.3 Constructor summary

HTMLtoLaTeXBackEnd(StringBuffer) Constructs a new instance.

1.4.4 Method summary

fixText(String) Converts a HTML string into LATEX using an instance of HTMLtoLaTeXBackEnd.

handleEndTag(HTML.Tag, int) This method handles HTML tags that mark an ending (e.g.

handleSimpleTag(HTML.Tag, MutableAttributeSet, int) This method handles simple HTML tags (e.g.

handleStartTag(HTML.Tag, MutableAttributeSet, int) This method handles HTML tags that mark a beginning (e.g.
handleText(char[], int) This method handles all other text.

1.4.5 Constructors

• HTMLtoLaTeXBackEnd

public HTMLtoLaTeXBackEnd(java.lang.StringBuffer ret)

- Description

Constructs a new instance.

- Parameters

* StringBuffer - The StringBuffer where the translated HTML is appended.

1.4.6 Methods

• fixText

public static java.lang.String fixText(java.lang.String str)

- Description

Converts a HTML string into LATEX using an instance of HTMLtoLaTeXBackEnd.

• handleEndTag

public void handleEndTag(javax.swing.text.html.HTML.Tag tag, int pos)

- Description

This method handles HTML tags that mark an ending (e.g. </P>-tags). It is called by the parser whenever such a tag is encountered.

• handleSimpleTag

public void handleSimpleTag(javax.swing.text.html.HTML.Tag tag, javax.swing.text.MutableAttributeSet attrSet, int pos)

- Description

This method handles simple HTML tags (e.g. <HR>-tags). It is called by the parser whenever such a tag is encountered.

• handleStartTag

public void handleStartTag(javax.swing.text.html.HTML.Tag tag, javax.swing.text.MutableAttributeSet attrSet, int pos)

- Description

This method handles HTML tags that mark a beginning (e.g. <P>-tags). It is called by the parser whenever such a tag is encountered.

• handleText

public void handleText(char[] data, int pos)

- Description

This method handles all other text.

1.4.7 Members inherited from class HTMLEditorKit.ParserCallback

javax.swing.text.html.HTMLEditorKit.ParserCallback

flush, handle Comment, handle End
OfLine String, handle EndTag, handle Error, handle Simple
Tag, handle StartTag, handle Text, IMPLIED

1.5 Class InterfaceHierachy

Manages and prints a interface hierarchy. Use add to add another interface to the hierarchy. Use printTree to print the corresponding LATEX.

1.5.1 Declaration

public class InterfaceHierachy **extends** java.lang.Object

1.5.2 Field summary

root

1.5.3 Constructor summary

InterfaceHierachy() Creates new InterfaceHierachy

1.5.4 Method summary

```
add(ClassDoc) Adds another interface to the hierarchy
printBranch(RootDoc, SortedMap, double, double) Prints a branch of the
    tree.
printTree(RootDoc, double) Prints the LATEX corresponding to the tree.
```

1.5.5 Fields

• public java.util.SortedMap root

1.5.6 Constructors

- InterfaceHierachy public InterfaceHierachy()
 - Description
 Creates new InterfaceHierachy

1.5.7 Methods

• add

protected java.util.SortedMap add(com.sun.javadoc.ClassDoc cls)

- Description

Adds another interface to the hierarchy

• printBranch

protected void printBranch(com.sun.javadoc.RootDoc rootDoc, java.util.SortedMap map, double indent, double overviewindent)

- Description

Prints a branch of the tree. The branch is printed using TeXDoclet.os.

• printTree

public void printTree(com.sun.javadoc.RootDoc rootDoc, double overviewindent)

- Description

Prints the LATEX corresponding to the tree. The tree is printed using TeXDoclet.os.

1.6 Class MarkdownTest

This class is just for testing the Mardown processing output.

a) Some text

Markdown code:

```
some text some t
```

results in:

some text some t

text some text s

text some text

b) Lists

Markdown code:

unsorted:

1. item1

```
- item1
   - item11
   - item12
- item2
or :
+ item1
   + item12
       + item13
sorted :
1. item1
   1. item11
   2. item12
2. item2
   - item21
   - item22
3. item3
lists with paragraphs :
1. some text some
text some text some text
    some text some text some text some text some text
2. some text some text some text some text some text some text
results in:
  unsorted:
  • item1
      - item11
      - item12
  • item2
  or:
  \bullet item1
      - item12
          * item13
  sorted:
```

- (a) item11
- (b) item12
- 2. item2
 - item21
 - item22
- 3. item3

lists with paragraphs:

- 1. some text some text
 - some text some text some text some text some text
- 2. some text some text some text some text some text some text

c) Blockquotes

Markdown code:

```
some text some text some text some text some text
> some quoting text
>
> > some nested quoting text
> some quoting text
> ##### header in blockquote
> a list in blockquote :
>
> 1. item1
> 2. item2
     1. item21
      2. item22
> 3. item3
> some quoting text
>
>
     code in blockquote
```

results in:

```
some text some text some text some text some text
some quoting text
some nested quoting text
some quoting text
```

header in blockquote

```
a list in blockquote:
```

- 1. item1
- 2. item2
 - (a) item21
 - (b) item22
- 3. item3

some quoting text code in blockquote

d) Preformatted text

Markdown code:

```
code line 1
code line 2

results in :
   some preformatted :

code line 1
code line 2
```

e) Horizontal rules

Markdown code:

results in:

f) Emphasis

Markdown code:

```
*single asterisks* (em)
_single underscores_ (em)

**double asterisks** (strong)
__double underscores__ (strong)
```

results in:

```
single asterisks (em)
single underscores (em)
double asterisks (strong)
double underscores (strong)
```

h) Code

Markdown code:

```
some code : 'TeXDoclet extends Doclet' and ''There is a literal backtick (')
here.''

results in :
   some code : TeXDoclet extends Doclet and There is a literal backtick (') here.
```

1.6.1 Declaration

public class MarkdownTest **extends** java.lang.Object

1.6.2 Constructor summary

MarkdownTest()

1.6.3 Constructors

• MarkdownTest public MarkdownTest()

1.7 Class Package

This class is used to manage the contents of a Java package. It accepts ClassDoc objects and examines them and groups them according to whether they are classes, interfaces, exceptions or errors. The accumulated Vectors can then be processed to get to all of the elements of the package that fall into each category. If needed the classes, interfaces, exceptions and errors can be sorted using the sort method.

1.7.1 See also

```
- Package.sort() (in 1.7.8, page 15)
```

1.7.2 Declaration

public class Package **extends** java.lang.Object

1.7.3 Field summary

classes The classes this package has in it
errors The errors this package has in it
exceptions The exceptions this package has in it
interfaces The interfaces this package has in it
pkg The name of the package this object is for
pkgDoc

1.7.4 Constructor summary

Package(String, PackageDoc) Construct a new object corresponding to the passed package name.

1.7.5 Method summary

addElement(ClassDoc) Adds a ClassDoc element to this package. sort() Sorts the vectors of classes, interfaces exceptions and errors.

1.7.6 Fields

- protected com.sun.javadoc.PackageDoc pkgDoc
- protected java.lang.String pkg
 - The name of the package this object is for
- protected java.util.Vector classes
 - The classes this package has in it
- protected java.util.Vector interfaces
 - The interfaces this package has in it
- protected java.util.Vector **exceptions**
 - The exceptions this package has in it
- protected java.util.Vector errors
 - The errors this package has in it

1.7.7 Constructors

• Package

public Package(java.lang.String pkg, com.sun.javadoc.PackageDoc doc)

- Description

Construct a new object corresponding to the passed package name.

- Parameters
 - * pkg the package name to use

1.7.8 Methods

• addElement

public void addElement(com.sun.javadoc.ClassDoc cd)

- Description

Adds a ClassDoc element to this package.

- Parameters

* cd - the object to add to this package

• sort

public void sort()

- Description

Sorts the vectors of classes, interfaces exceptions and errors.

1.8 Class TableInfo

This class provides support for converting HTML tables into LATEX tables. Some of the things **NOT** implemented include the following:

- valign attributes are not processed, but align= is.
- rowspan attributes are not processed, but colspan= is.
- the argument to border= in the table tag is not used to control line size

Here is an example table.

Column 1	Heading		Column two heading	Column three heading
data			Span two columns	
more data			right	left
A				
nested				
table				
exam-				
ple				
Column	Column	Colu	mn	
one	\mathbf{two}	$_{ m three}$		
Head-	head-	head-	-	
ing	ing	ing		
data	Span			
	two			
	columns			
more	right	left		
data				
1 first line		ine		
2 second line				
3	3 third line			
4 fourth line				

1.8.1 Declaration

public class TableInfo **extends** java.lang.Object

1.8.2 Constructor summary

TableInfo()

1.8.3 Method summary

endCol() Ends the current column.

endRow() Ends the current row.

endTable() Ends the table, closing the last row as needed

startCol(MutableAttributeSet) Starts a new column, possibly closing the current column if needed

startHeadCol(MutableAttributeSet) Starts a new Heading column, possibly closing the current column if needed.

startRow(MutableAttributeSet) Starts a new row, possibly closing the current row if needed

startTable(StringBuffer, MutableAttributeSet) Constructs a new table object and starts processing of the table by scanning the passed to count columns.

1.8.4 Constructors

• TableInfo public TableInfo()

1.8.5 Methods

• endCol

public void endCol()

- Description

Ends the current column.

- Parameters
 - * ret The output buffer to put $\LaTeX 2_{\varepsilon}$ into.
- endRow

public void endRow()

- Description

Ends the current row.

- Parameters
 - * ret The output buffer to put $\LaTeX 2_{\mathcal{E}}$ into.
- endTable

public java.lang.StringBuffer endTable()

- Description

Ends the table, closing the last row as needed

- Parameters
 - * ret The output buffer to put $\LaTeX 2_{\varepsilon}$ into.
- startCol

public void startCol(javax.swing.text.MutableAttributeSet attrSet)

- Description

Starts a new column, possibly closing the current column if needed

- Parameters
 - * ret The output buffer to put $\LaTeX 2_{\varepsilon}$ into.
 - * p the properties from the tag
- startHeadCol

public void startHeadCol(javax.swing.text.MutableAttributeSet attrSet)

- Description

Starts a new Heading column, possibly closing the current column if needed. A Heading column has a Bold Face font directive around it.

- Parameters

- * ret The output buffer to put LATEX 2ε into.
- * p The properties from the tag

• startRow

public void startRow(javax.swing.text.MutableAttributeSet attrSet)

- Description

Starts a new row, possibly closing the current row if needed

- Parameters

- * ret The output buffer to put LATEX into.
- * p The properties from the tag

• startTable

public java.lang.StringBuffer startTable(java.lang.StringBuffer org, javax.swing.text.MutableAttributeSet attrSet)

- Description

Constructs a new table object and starts processing of the table by scanning the passed to count columns.

- Parameters

- * p properties found on the tag
- * ret the result buffer that will contain the output
- * table the input string that has the entire table definition in it.
- * off the offset into where scanning should start

1.9 Class TestFilter

This class filters out classes beginning with "Test" when applied to the Doclet.

1.9.1 Declaration

public class TestFilter extends java.lang.Object implements ClassFilter

1.9.2 Constructor summary

TestFilter()

1.9.3 Method summary

includeClass(ClassDoc) Returns false if class name starts with "Test".

1.9.4 Constructors

• TestFilter public TestFilter()

1.9.5 Methods

• includeClass

public boolean includeClass(com.sun.javadoc.ClassDoc cd)

Description

Returns false if class name starts with "Test".

1.10 Class TeXDoclet

This class provides a Java javadoc Doclet which generates a \LaTeX 2 $_{\mathcal{E}}$ document out of the java classes that it is used on. This is convenient for creating printable documentation complete with cross reference information.

Supported HTML tags

<a> including an additional attribut "doprinturl". Since the output of the doclet should be printable, the href attribut of tags is printed in parentheses following the link if attribut "doprinturl" is set. Sometimes this is undesirable, and omitting "doprinturl" attribut will prevent this.

```
<dl> with the associated <dt><dd></dl>tags
```

but not align=center...yet

br> but not clear=xxx

including all the associated

ordered lists

ul> unordered lists

 font coloring

preformatted text

<code> fixed point fonts

<i> italized fonts

 bold fonts

<sup> superscript

<center> center

 image located in java sources ()

- 1. example converted from JPG: (image file not found)
- 2. example converted from GIF: (image file not found)

 image located in the www: (see image at http://upload.wikimedia.org/wikipedia/commons/9/92/LaTeX.

Extra tags

<TEX>

A new tag is defined: <TEX>. This tag is useful for passing TeX code directly to the TeX compiler. The following code:

 $<\!BR\!><\!BR\!><\!B>$ This alternative text will appear if the javadoc/HTML is parsed by any other doclet/browser< $\!BR\!><\!BR\!><\!/TEX\!>$

will produce the following result:

$$F(x) = \int_{-\infty}^{x} \frac{1}{\sqrt{2\pi}} e^{-\frac{z^2}{2}} dz$$

The "alternative" text is ignored by the TeXDoclet, but useful if you want to use both the TeXDoclet and a regular HTML based doclet.

<PRE format="markdown">

Instead of writing your java documentation in often hard to read HTML code you can make use of Markdown syntax. The HTML <PRE> tag is used therefore to prevent your IDE from automatically reordering your Markdown documentation text. Markdown parsing is based on the Pegdown implementation. The following code:

```
<PRE format="markdown">
```

some text some text some text some text some text some text

Lists

- item1
 - 1. item11
 - 2. item12
- item1

Text formatting

```
_emphasis_ and __strong__ and some 'code' :
    code line 1
    code line 2

some text some text some text some text some text some text
<PRE>
    will produce the following :
    some text s
```

Lists

- \bullet item1
 - 1. item11
 - 2. item12
- item1

Text formatting

```
emphasis and strong and some code :
code line 1
code line 2
  some text some text some text some text some text some text
```

1.10.1 See also

```
HTMLtoLaTeXBackEnd (in 1.4, page 6)
TeXDoclet.start(RootDoc) (in 1.10.8, page 23)
```

1.10.2 Declaration

```
public class TeXDoclet extends com.sun.javadoc.Doclet
```

1.10.3 Field summary

```
BOLD
CHAPTER_LEVEL
ITALIC
os Writer for writing to output file
SECTION_LEVEL
SUBSECTION_LEVEL
TRUETYPE
```

1.10.4 Constructor summary

```
TeXDoclet()
```

1.10.5 Method summary

```
finish()
init()
initSections()
main(String[])
optionLength(String) Returns how many arguments would be consumed if option
    is a recognized option.
start(RootDoc) Called by the framework to format the entire document
validOptions(String[][], DocErrorReporter) Checks the passed options and
    their arguments for validity.
```

1.10.6 Fields

- public static final java.lang.String **SECTION_LEVEL**
- public static final java.lang.String CHAPTER_LEVEL
- public static final java.lang.String SUBSECTION_LEVEL
- public static final java.lang.String BOLD
- public static final java.lang.String TRUETYPE
- public static final java.lang.String ITALIC
- $\bullet\,$ public static java.io. Print
Writer ${\bf os}$
 - Writer for writing to output file

1.10.7 Constructors

• TeXDoclet public TeXDoclet()

1.10.8 Methods

- finish public static void finish()
- init public static void init()
- initSections public static void initSections()
- main public static void main(java.lang.String[] args)

• optionLength

public static int optionLength(java.lang.String option)

- Description

Returns how many arguments would be consumed if option is a recognized option.

- Parameters

* option - the option to check

• start

public static boolean start(com.sun.javadoc.RootDoc root)

- Description

Called by the framework to format the entire document

- Parameters

* root – the root of the starting document

• validOptions

public static boolean validOptions(java.lang.String[][] args, com.sun.javadoc.DocErrorReporter err)

- Description

Checks the passed options and their arguments for validity.

- Parameters

- * args the arguments to check
- * err the interface to use for reporting errors

1.10.9 Members inherited from class Doclet

com.sun.javadoc.Doclet

languageVersion, optionLength, start, validOptions
